PROJECTS

- **Business Management System**
  The business management system deals with the business that allows business to keep track of their business with the help of an automated and robust system through which their transaction with the vendors and customers are well-monitored. It is a desktop application. The system was created with the help of C# and MS-SQL. This system has many areas covered like the details of salary of the employees, the details of the employees to the list of products, customers and vendors.

- **Store**
  The Store is also an ecommerce project that I have created with the help of templates. The users can view the desired items by their categories and search the required item. The item can be added to cart and unwanted items can be removed from the cart before the delivery details is filled. The signup and login features are available to utilize the facilities prevail in the site. The contact features help in case of any queries and help necessary.
